Everything you need to find signal interface solutions fast!

The Moore Industries website provides industry applications, news, technical papers, and product information with easy to navigate menus that allow you to find what you need quickly and efficiently. Explore our online product catalog where you will find useful information and downloads for each of our products. Visit www.miinet.com now.

The latest innovations in monitoring and control interface solutions are just a click away.

When you need to interface field processes with computer-based systems, readout equipment, and other instrumentation... our technology, services and expertise help you do it efficiently, safely and cost-effectively.

Signal Transmitters, Isolators and Converters

Convert, isolate, split, boost and step down process signals so field instruments can interface directly with indicators, recorders, DCS, PLC and SCADA systems.

I/P and P/I Converters

Convert a current signal to a pneumatic signal so a DCS or PLC can control a valve or actuator; or convert pneumatic signals to current signals so remote pneumatic devices can interface with electronic instruments and computer-based monitoring systems.

Indicators and Displays

Take a process input signal from a transmitter loop and view real-time process status in rugged and hazardous field environments.

AC Power Transducers and Monitors

Schedule maintenance, identify inefficiencies, cut energy use and prevent expensive damage to a load device by accurately monitoring AC power use.

Temperature Sensors, Transmitters and Assemblies

Take a weak, low-level RTD or thermocouple signal and convert it to a high-level analog signal more suitable for long-distance transmission through a noisy plant, and ready for direct interface with an indicator, recorder, PLC, DCS or SCADA system.

Smart HART® Loop Monitors, Interfaces and Gateways

Convert HART process variables and diagnostic data from smart multivariable transmitters and valves to MODBUS/TCP, HART-IP, MODBUS RTU, analog and discrete signals to prevent costly false shutdowns; and warn of unwanted process or instrument fault conditions.

Process Controllers, Monitors and Backup Stations

Precisely control and monitor a temperature, pressure, level or flow process variable in batch and continuous processes, or back up critical or safety-related loops controlled by PLC, DCS and other control systems.

Functional Safety - IEC 61508

Monitor, alarm or shutdown critical and hazardous processes, measure critical temperatures, isolate a Safety Instrumented System (SIS) loop while passing HART data, or split critical signals while passing HART data.

Limit Alarm Trips and Switches

Provide on/off control, warn of trouble, or provide emergency shut-down by sending one or more alarm (relay) outputs when a monitored process signal falls outside of a selected high and/or low limit.

Process Control and Distributed I/O Networks

Eliminate expensive point-to-point wires by sending just a few—or thousands of—process monitoring and control signals between the field and control room on one digital communication link.

Fieldbus Device Couplers and Power Supplies

Deliver a fast and easy way to connect, protect, power and terminate multiple fieldbus devices in FOUNDATION™ Fieldbus and PROFIBUS PA segments.
